

# Ridgewood Water Weekly

Week of June 10, 2024

## Road Work Ahead Moderate Potential for Traffic Diversion

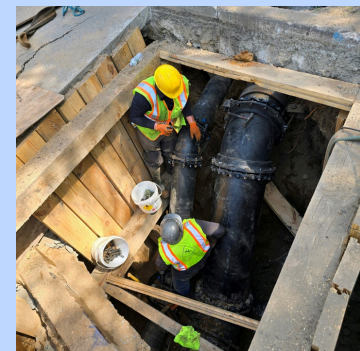

### STREETS AFFECTED OVER THE NEXT TWO WEEKS

**Ridgewood:** East Ridgewood Avenue between South Irving Street and North Van Dien Avenue

**Glen Rock:** Dunham Place, Chatham Place, Plymouth Place, Alan Avenue, Chadwick Avenue and Grove Street

### FOR DETAILS, [VIEW RIDGEWOOD WATER'S SERVICE ADVISORY MAP](#)

This year, Ridgewood Water launched an interactive map to provide customers with an overview of upcoming work that might lead to road closures and detours.

## Capital Improvement Projects

### RAW WATER MAIN INSTALLATION

As part of our PFAS Treatment Master Plan, Ridgewood Water is installing raw water mains throughout the system. These mains bring water from 31 current treatment facilities to one of the 12 proposed PFAS Treatment Facilities (five of which are already in service or under construction).

### WATER MAIN REPLACEMENT/REHABILITATION

Ridgewood Water has more than 300 miles of distribution water main that bring drinking water from our treatment facilities to our customers' homes every day. This year, our goal is to rehabilitate or replace approximately 1.5 miles or 7,900 linear feet of distribution water main as part of our commitment to continued reinvestment in our water system.

## Ridgewood Water by the Numbers

### MARKOUTS, METERING AND MORE

When Ridgewood Water learns that a contractor or utility will be working on a street in our service area, we make sure that our underground pipes and service lines are clearly "marked" with blue paint and/or red flags. These markouts enable contractors and utilities to operate efficiently and dig into the ground safely. So far this year, **3,174 markouts** have been done. In addition, more than **900 metering appointments** were completed, all **1,754 fire hydrants** were inspected, and **81 lead service lines** were replaced.
